SUMMARY

Frontend Developer with nearly 4 years of industry experience building scalable web and cross-platform desktop applications. Strong expertise in real-time UI architecture, high-frequency hardware data rendering, Micro-Frontends, and performance optimization. Currently collaborating with an international Agile team in Singapore, working closely across frontend interfaces, native desktop applications, and hardware services.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+)
Frameworks/Libraries: React.js, Next.js, Electron.js
State Management & Data: Redux (Redux Toolkit), Zustand, RESTful APIs, WebSocket
UI & Styling: Tailwind CSS, Shadcn/ui, Material UI (MUI), React Bits, Responsive & Accessible Design
Architecture & Optimization: Micro-Frontend (Module Federation), High-Frequency Rendering Optimization, Code Splitting
Tools, CI/CD & Testing: Git, Docker, Jenkins (CI/CD), Postman, JMeter, Jira**,** Bitbucket
Languages: English (Intermediate – working proficiency in cross-border teams)

WORK EXPERIENCE

S3Corp | Frontend Developer **2/2025 – Present**

Project: Synapse 4 (Cross-Platform Gaming Device Desktop Application)

- Engineered and maintained scalable frontend architecture for a cross-platform gaming peripheral desktop application using Electron, React.js, TypeScript, and Micro-Frontend.
- Served as Frontend Lead for the Macro Module, spearheading end-to-end technical design and feature delivery for complex macro recording, sequence editing, and device key-binding.
- Implemented real-time bidirectional communication between hardware middleware and the UI via BroadcastChannel, ensuring responsive device feedback and high system stability.
- Optimized rendering performance for high-frequency hardware updates (device telemetry, lighting effects, macro profiles) using React memoization, virtualized rendering, and event throttling, reducing UI lag and memory overhead by ~15%.
- Collaborated closely with international product and engineering teams in Singapore; monitored Jenkins CI/CD pipelines and resolved build/packaging issues to maintain smooth release schedules.

VTC Smarttech | Frontend Developer **10/2022 – 1/2025**

Project: Citizen Identity Card (CIC) Authentication Platform

- Designed and developed scalable frontend architecture using React.js, TypeScript, Redux, and Micro-Frontend (Module Federation) to modularize enterprise identity management workflows.
- Integrated RESTful APIs and WebSockets to stream real-time smart-card scanning and biometric verification results to operator dashboards.
- Built a companion desktop authentication client using C# (.NET Core, WinForms) to interface with physical ID card readers and securely bridge hardware data to the web application.

Project: Edocsign (Digital Signature & Contract Management Platform)

- Developed end-to-end digital signing interfaces using React.js, Tailwind CSS, and Shadcn/ui, enabling interactive PDF preview, drag-and-drop signature placement, and multi-step approval workflows.
- Enhanced application performance and reduced initial bundle load time by ~30% through route-based code splitting, lazy loading, and efficient state management with Zustand/Redux.
- Partnered with Product Owners and UI/UX Designers to refine technical feasibility and elevate user experience across desktop and mobile browsers.

SMARTLOG | Web Manual Tester **6/2022 – 9/2022**

- Designed and executed comprehensive test plans and test cases covering complex logistics UI/UX workflows and business logic.
- Conducted automated/manual API testing via Postman and load/stress testing using JMeter to identify performance bottlenecks prior to production deployment.
- Collaborated directly with Frontend and Backend engineers to reproduce edge-case defects, establishing a strong quality-assurance mindset applied throughout subsequent frontend development roles.

LOFIVN company | Frontend Intern **5/2021 – 8/2021**

- Built and customized responsive WordPress websites, ensuring cross-browser compatibility, UI consistency, and SEO-friendly structure.

EDUCATION

Ho Chi Minh City University of Natural Resources and Environment | **2018 – 2022**

- Degree: Engineer’s Degree in Information Technology
- Graduation Grade: Good
